

Accuracy report

What metric are you using? Why ?

The metric used is a graphic type visualizing the distribution of a dataset where the feeling data is divided into POSITIVE, NEUTRAL, and NEGATIVE by the TWEETS QUANTITY.

This type of visualization was chosen because it is easy to be viewed and understood, giving a better sense of how the variables are distributed.

Which type of test did you choose?

None specific, just comparing the tweets with the revealed feelings.

I used some points of #DEBUG in my code to visualize some data in processing. This #DEBUG parts are in code.
